hunquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
on Jan 15, 2002 this sequence version replaced gi:1812468.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Insert size: 185000; agarosefp

All repeats were Identified sing RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                          11323 11422: gap of 100 bp 11423 12302: contig of 880 bp in length 12303 12402: gap of 100 bp 12403 13280: contig of 878 bp in length 13281 13380: gap of 100 bp 13381 14241: contig of 861 bp in length 14342 14341: gap of 100 bp 14342 15196: contig of 855 bp in length 15197 15296: gap of 100 bp 15297 15296: gap of 100 bp 15296: gap of 100 bp 15297 15296: gap of 100 bp 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15297 15

NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Web site: http://www-seq.wi.mit.edu

LXR (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, by administering a compound that modulates or RXR-mediated transcriptional activity -

Claim 8; Fig 1; 317pp; English.

ø The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABC1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) 1 gene. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apollpoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1

10; are useful for developing pharmaceutical agents for the treamfact of meart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia. 1879 1464 1524 1584 1644 1938 2058 1704 gcctgcttgggcctcttctacgggtctgtcctgagtcttctatgaat---ccttcagggc 1761 1821 2117 311 430 191 251 371 490 550 610 670 26; Gaps ggctccacatgcacttccagggcctgcttgg--ctcttctatgggtctgtcctgagtgtt 73 gatagaaccactgatgtgagtacctgggcttgagccgtggcctggagatcctgttgactg tagcatggagggggttgtgcagctgaatgtctgcatgcaggtggtgggagttctggaat tagcatggaggggcttgt-cagctgaatgtctgtatgcaggtggtgggagttctggaat atgatggagctggaggtgggaagaagtaggcttgggggcagctctctcatgccacctca ttctggccaaaactcaggtcaaactgtgaagagtctaaatgtgaatctgccttcaaggt agattcatatttagactcttcacagtttgacctgagttttggccagaataaggtgacatt tagtttgttggcttgatggatgacttaaatatttagac-atggtgtgtaggcctgcatt cctactcttgcctttttttttgccctccagtgttttgggtagttttgct-ccctacag agggaggctgatcaataatgaaattaaaagggggctggt-ccatattgttctgtgttt atgatggagctggaggtgggaagaagtaggcttgggggcagctctctcatgccacctca ggctacaaaggtatcttgtcaaggtaggagaccttgtggcctccacgtgcacttccagg tagtttgttggcttgatgaatgacttaaatatttagacatatggtgtgtaggcctgcatt cctactcttgccttttttgcccctccagtgttttgggtagttttgctcccctacag ccaaaggcaaacagagaagttggaggtctggagtggctacataattttacacgactgcaa ccaaaggcaaacagataagttggaggtctggagtggctacataattttacacgactgcaa ttctctggctgcacttcacaaatgtatacaaactaaatacaagtcctgtgtttttatcac Score 1485.4; DB 22; Length 1643; Pred. ```
The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) I gene. ABCI resides in cell membranes and utilises ATP Mydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangher disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9422-9431. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonuclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a least 15 nucleotides; or (b) a combination of sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a coligonucleotide comprises as 1 east 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the approximation of the full-length cDNAs. The primers are also useful for the the full-length cDNAs. The primers also useful for the checking and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers also useful for AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to

The present invention describes primer sets for synthesising 5602 (ill-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligounclectide complementary to the complementary strand of a polyvuclectide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonuclectide comprising a sequence complementary to the complementary strand of a polyvucleotide which comprises a 5'-end sequence and an oligonuclectide comprising a sequence complementary to the polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence of an oligonucleotide comprises a 1'-end sequence of polynucleotide which comprises a 1'-end sequence of polynucleotide which comprises a 1'-end sequence of the primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the price contains encoded by the full-length cDNAs. The primers are also useful for the AH13632 to AAH13632 and AAH13633 to AAH3633 represent human cDNA sequences; and AAH13632 to AAH13632 or FPARESENT human annon acid sequences; and AAH13632 to AAH13632 or FPARESENT human annon acid sequences; and AAH13632 to AAH13632 or FPARESENT human annon acid sequences; and the exemplification and an annon acid sequences; and an the exemplification and an annon acid sequences; and an annon acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2896 aattgcgagcgagagtgagtggggccggacccgcagagccgaccttctctccc 2955
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2956 gggctgcggcagggcagggcggggagctccgcgcaccaacagagccggttctcagggcgc 3015

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ctgtaacctctgcctcccgggttcaagcgattctcctgcctcagcctc----ctga 1080

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovariant cancer and other cancers of the adrenal gland, bone, marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hyproiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and cepilepsy; and (f) infectious diseases such as viral, bacterial, fungal Note: The sequence data for this patent did not form part of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; SEQ ID NO 9030; 1701pp + Sequence Listing; English.

```
The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the genes are The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune throughly cancer and other cancer of sisease, allergies, conditing disease, multiple sclerosis, rheumatch arthritis and ulcerative collitis; (c) cardiovascular disorders such as myocardial ischaemias;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3043
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
and parasitic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2922 AGAGAGAAAAAAAGAGTCTTGATAAGGAACTTGGCATAACTAAATAATTTGGAAGATAAA 2863
